

PROJECT DESIGN PHASE

Date: 02 July 2026 | Project: Strategic Product Placement Analysis (SPPA)

Problem-Solution Fit Template

Section	Content
Problem	Retail store managers struggle to determine optimal shelf positions and pricing strategies due to complex, voluminous sales data. Manual analysis is inefficient and fails to reveal patterns in product placement, promotions, competitor pricing, seasonal demand, and customer demographics that influence sales.
Customer	Retail store managers, BI analysts, and marketing teams who need actionable data insights to make informed decisions about product placement, pricing, and promotions.
Existing Situation	Managers manually review spreadsheets, struggle with siloed data, and make placement decisions based on intuition rather than data-driven insights.
Your Solution	Interactive Tableau dashboards and stories that consolidate sales data, visualize product performance across categories, shelf positions, promotion impact, competitor pricing, and customer demographics all in one view.
Behavior Change	Managers move from intuition-based to data-driven decision-making. They can explore interactive visualizations to identify placement patterns, evaluate promotions, and compare pricing strategies.
Value Proposition	Faster, more accurate insights into product placement effectiveness; improved sales through optimized positioning; better promotional ROI; deeper customer understanding.

Proposed Solution Template

S.No	Parameter	Description
1	Problem Statement	Retail stores lack data-driven insights into product placement, promotion effectiveness, competitor pricing, and seasonal demand patterns, leading to suboptimal sales performance.
2	Idea / Solution Description	An interactive Tableau dashboard and story solution that analyzes retail sales data, providing visual insights into product placement performance, promotional impact, competitor pricing comparisons, seasonal demand trends, and customer demographics. The solution integrates visualizations into a responsive Bootstrap website for easy stakeholder access.
3	Novelty / Uniqueness	Combines 8 different visualization types into a single interactive dashboard with dynamic filtering. Includes a Tableau Story for narrative-driven analysis. Embedded in a professional website with responsive design for accessibility across devices.
4	Social Impact / Customer Satisfaction	Empowers retailers to make informed decisions, potentially increasing sales and profitability. Helps reduce waste by optimizing inventory placement. Improves customer experience through better product visibility and availability.
5	Business Model	Can be offered as a Business Intelligence service to retail chains. Potential revenue from dashboard customization, ongoing data analysis services, and training for retail staff.
6	Scalability	The dashboard can be expanded to include additional data sources (real-time sales, online transactions). Can be scaled to multiple store locations. Architecture supports addition of predictive analytics and machine learning models.

Solution Architecture

Solution Architecture Diagram Description:

Component	Technology	Description
Frontend UI	HTML5, CSS3, Bootstrap 5	Responsive website displaying embedded Tableau visualizations
Dashboard	Tableau Desktop/Public	Interactive dashboard with 8 visualizations and filters
Story	Tableau Story	Sequential analysis narrative with annotations
Data Source	CSV (Kaggle)	Retail dataset with ~1,000 records
Data Processing	Tableau Desktop	Data cleaning, validation, calculated fields
Hosting	Tableau Public / GitHub Pages	Cloud hosting for visualization and website
